NEUROSCIENCE & PUBLIC POLICY SEMINAR

THE NUTS AND DOLTS OF SCIENCE POLICY IN WASHINGTON

MICHAEL STEBBINS
President, Scientists and Engineers for America Action Fund
Director of Biology Policy, Federation of American Scientists

The line between science policy and politics has been deliberately blurred on both sides of the political spectrum, often at the expense of science. We will discuss the rise, fall and possible resurrection of science policy advice in Washington; what is in store for science funding in the next 5 years; why scientists should be more involved in elections and how you can participate without leaving the lab.

FRIDAY, MAY 9, 2008
4:00 PM
341 BARDEEN
